THE FLORIDA DEPARTMENT OF HEALTH IN LEE COUNTY IS RESPONDING TO THE NATIONWIDE MONKEYPOX OUTBREAK

Contact: Imani Stafford

Lee-PIO@FLHealth.gov

Lee County, Fla – The Florida Department of Health in Lee County (DOH-Lee) is responding to the monkeypox outbreak. There are cases of monkeypox in at least 43 states and Washington DC. To date, there have been no monkeypox-related deaths outside of endemic countries. The risk of monkeypox to the general population remains low.

DOH-LEE continues to conduct epidemiological investigations to notify possible exposures and offer potential post-exposure prophylaxis. DOH-Lee will offer the monkeypox vaccine to high-risk groups as doses become available from the federal government.

Up to date information on monkeypox is available at [FloridaHealth.gov](https://www.floridahealth.gov). Case data for monkeypox, as well as other reportable diseases, can be found on [FLHealthCharts.gov](https://www.flhealthcharts.gov).

Prevention and Treatment

If health care providers suspect a possible case of monkeypox, **immediately** [contact your local health department](#) or the 24/7 disease reporting hotline at 850-245-4401. Local county health departments can help providers obtain monkeypox virus-specific real-time polymerase chain reaction (PCR) testing.

Human-to-human transmission generally requires prolonged, face-to-face contact, direct contact with lesion materials, or indirect contact with lesion materials through contaminated items, such as contaminated clothing. Therefore, the risk of exposure remains low.

Health care providers should remain vigilant of information related to monkeypox:

- [Monkeypox symptoms](#), especially among individuals with [relevant travel history](#).
- [Transmission](#) and [incubation](#) periods.
- [Specimen collection](#).
- Infection control procedures in the [home](#) and [hospital](#) settings.
- [Clinical recognition](#), and the [characteristic rash](#) associated with monkeypox.
- [Prophylaxis and possible treatments](#) for monkeypox.
- Monitoring of those [exposed to monkeypox](#).

The public should also remain vigilant of the current meningococcal outbreak. **Demographic impacts are similar among meningococcal and monkeypox cases.** The [meningococcal vaccines](#) are available to high-risk populations at every county health department, free of charge. Floridians can find more information on meningococcal disease [here](#).

About the Florida Department of Health

The Florida Department of Health, nationally accredited by the [Public Health Accreditation Board](#), works to protect, promote, and improve the health of all people in Florida through integrated state, county, and community efforts.

Follow us on Twitter at [@HealthyFla](#) and [Facebook](#). For more information about the Florida Department of Health, please visit <http://www.floridahealth.gov>.
